

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1-4. (CANCELED).

5. (CURRENTLY AMENDED) A disc player-playing system connectable to a mixing apparatus which is capable of mixing two audio signals and has an operating part for adjusting a mixing level, said disc player-playing system comprising:

an outputting part which outputs an audio signal read from a disc;
a memory for storing a designated address position; and
a controller which performs a control operation to start a reproduction operation when an instruction to start reproduction is received from said mixing apparatus and stop the reproduction operation and to move a pickup to an address position stored in said memory to stand by when an instruction to stop reproduction is received from said mixing apparatus.

6. (CURRENTLY AMENDED) A disc player-playing system as claimed in claim 5, wherein said address position stored in said memory is an address position previously designated by a user.

7. (CURRENTLY AMENDED) A disc player-playing system connectable to a mixing apparatus which is capable of mixing two audio signals and has an operating part for adjusting a mixing level, said disc player-playing system comprising:

outputting means for outputting an audio signal read from a disc;
memory means for storing a designated address position; and
control means for performing a control operation of starting a reproduction operation
when an instruction to start reproduction is received from said mixing apparatus, and stopping
the reproduction operation and moving a pickup to an address position stored in said memory
means to assume a waiting state when an instruction to stop reproduction is received from said
mixing apparatus.

8. (CURRENTLY AMENDED) A disc ~~player~~playing system as claimed in claim 7,
wherein said address position stored in said memory means is an address position previously
designated by a user.

9. (CURRENTLY AMENDED) A disc ~~player~~playing system connectable to a mixing
apparatus which is capable of mixing two audio signals and has an operating part for adjusting a
mixing level, said disc player comprising:
an outputting part which outputs an audio signal read from a disc; and
a memory for storing a designated address position;
wherein said disc player starts a reproduction operation when an instruction to start a
reproduction is received from said mixing apparatus, and stops the reproduction operation and
moves a pickup to an address position stored in said memory to stand by when an instruction to
stop is received from said mixing apparatus.

10. (CURRENTLY AMENDED) A disc ~~player~~ playing system as claimed in claim 9,
wherein said address position stored in said memory is an address position previously designated
by a user.

11. (NEW) A disc player connectible to a mixing apparatus which is capable of
mixing two audio signals and has an operating part for adjusting a mixing level, said disc player
comprising:

a pick up; and
a part which stops a reproduction operation of said disc player and moves a reading
position of said pickup to a previously designated address position in response to a cue signal
from said mixing apparatus.
